

## Mechanical Bearing Pullers

### Industrial Reversible/Double-Ended Adjustable

Used for the removal of gears, ball races, bearings, pulleys and sprockets from a drive shaft. With reach capacities of 75, 100, 150 and 200mm.

All sizes have double-ended, adjustable, reversible legs and can be used for internal and external applications.

#### Selection

Always use a three jaw puller whenever possible. This produces better load distribution across the jaws and easier and safer removal of the part. Determine what 'spread' is needed - this is the width of the part to be removed. The reach capacity is determined by the depth of the part to be removed.

**UP TO 175mm REACH**

All pullers can be assembled for internal or external use.

Spare Jaws are also Available

### Extra Long Reach Mechanical Puller - 2 Jaw

#### Reversible

Manufactured from drop forged hardened alloy steel. Three position extra long legs to be used where access is limited. The puller legs are securely located on the bearing by screwing down the tapered nut to lock the arms in position. The legs are then retracted with the bearing by turning the T-bar to extend the thrust bolt on to fixed shaft.

**Spread:** 10 - 50mm.

**Reach:** 300mm.
