Pruners

Titanium Bonded Nonstick and Titanium Nitride coatings improve blade strength and help blades stay sharper longer; Titanium Bonded and Nonstick coatings also improve corrosion resistance. Stainless steel blades are inherently corrosion resistant.

Bypass and Anvil—Bypass models have curved blades to allow clean cutting, and can cut near the trunk without crushing plant tissue. 468F45 FATMAX has a grip hook for maximum cutting power on large limbs. Features ergonomic nonslip rubber grips for comfort and curved handles to increase leverage. TiCN-coated blades will cut through 1" of live growth with minimal effort. Anvil pruners are excellent for cutting woody stems or deadwood.

Flower—Flower pruners have pointed blades that can easily maneuver the tight spaces between flower stems.

2-Pc. Cutter Sets—Include bypass pruner and flower pruner.
