Chain-Link Fencing

A. Fabric—Galvanized zinc is uniformly applied to steel wire before weaving for an even, protective coating that is free of sharp burrs. Smooth fabric is easy to work with during installation.

B. Top Rails—Pregalvanized sheet steel is formed into tubing.

C. and D. Terminal and Line Fence Posts—Galvanized steel terminal posts are used at the ends of a run as corner posts or as gate posts. Line posts are used as support posts in the middle of a run.

E. Gates—Steel is galvanized before weaving. Welded frame with 17-ga., 1 $\frac{3}{8}$ " tubing, and 9-ga. fabric fill, which is galvanized before weaving into 2" mesh.

F. to Z. Fence and Gate Hardware—Extensive assortment of aluminum and galvanized fittings are manufactured to rigid quality standards.
