## Wildlife Repellents

**Systemic Repellents**—Deliver hot pepper concentrate through the plant roots making plants inedible to animals. Maintain potency while evenly distributed throughout the plant. One treatment can last the entire growing season. Not for use on food crops.

**Granular Repellent**—Organic, all-natural formula is safe to use around children, pets, and food crops. Granules will not wash away in the rain, evaporate, or freeze. Easy to apply by shaking on the ground.

**Electronic Repellents**—Use 6WB54 indoors. Sonic and ultrasonic sounds repel insects, rodents, bats, and

spiders. Used outdoors, 1DGX2 is a humane, maintenance-free ultrasonic yard protector for deer, raccoons, rabbits, squirrels, skunk, rodents, and more. Continuous or motion-sensor operation.

## Bird Barrier Bird Slides

Birds slide off surfaces because they can't get a grip. Use on ledges, eaves, angle irons, I-beams, and most "L" shaped ledges to protect against all bird species. Can be primed and painted to match color of structure to look like it's a part of the building. Trim for fit.

## Visual Bird Repellers

**2D and 3D Decoys**—Stake decoys into the ground to repel geese. 3D bodies swivel on stake and furry tail moves in the wind.

**Terror-Eyes**—Inflatable, moving bird predator uses holographic, moving eye lenses that follow infesting birds.

**Scare Eyes**—Inflatable repellent simulates glaring eyes of predator birds. Rotate colors within 3 weeks for max. effectiveness.

**Screech Owl**—20YR37 features 4 predator/scare sounds, which are photocell-activated during daylight hours.

**Gator Guard**—Floating alligator head repels geese and small animals from water areas.

**Irri-Tape**—Iridescent diffraction foil ribbon combines holography, wind, and light to create a ripple effect that pest birds perceive as a danger signal.

**Floating Swan**—Repels Canada geese. Effective on water or land; 2 steel anchoring stakes included. For best results, relocate the decoy periodically.

**Falcon Decoy**—Covers up to 6,000 sq. ft. Scares small pests and birds such as pigeons and gulls. Place on flat surface. Bottom has a plug that can be removed to fill with sand to weigh down base.

**Optical Gel**—Keeps birds off of structures without harming them. Supplied in ready-to-use plastic dish container which can be affixed to surfaces with commercially available dab of silicone. Birds see ultraviolet light spectrum as fire and avoid site. Gel has firm density that won't run. Resistant to high and low temperatures, rain, and snow.

## Bird Barrier

### Bird Exclusion Netting

Composed of thin, ultra-strong, knotted strands of polyethylene twine, this exclusion system denies pest birds access to any architectural configuration, including roof tops, overhangs, parking garages, etc.
