## Open Head Pails

Use for easy transport and storage of liquids and solids. Compatible lids can be ordered separately.

**Plastic pails** are lightweight and resist corrosion, impact, and damage from ultraviolet (UV).

**Stainless steel pails** withstand high temperatures and resist corrosion, rust, and scratches. Ideal for applications where moisture or bacteria growth is a concern, such as food processing, industrial manufacturing, and outdoor environments.

**Steel pails** withstand extreme temperatures and heavy loads. Suitable for hot/cold liquids, semi-solids, and solids. Commonly used for shipping or storage of non-food items.

## Open Head Pails with Lids

Pails come with a compatible lid to keep contents secure and uncontaminated during transport and storage.

**Screw-on lids** have threads that connect with the pail's rim threading to tightly secure lid.

**Snap-on lids** squeeze around the pail's rim to make an airtight seal.

**Lug covers** have tabs around the edge of the rim that push into pails to seal a barrier between the rim and lid. Prevent spills, exposure, and tampering.

**Lever lock covers** have a horizontal lever attached to the rim that tightens to create a firm seal between the lid and pail.

## Closed Head Pails for Liquids

Allow dispensing of liquids through an opening on the top. Tight-fitting lid allows them to hold contents securely, making them a preferred choice for air and overseas shipping of hazardous substances.

**Plastic pails** are lightweight and corrosion resistant.

**Steel pails** can withstand extreme temperatures and heavy loads. Suitable for hot/cold liquids, semi-solids, and oils.
