Powered-Lift/Manual-Push  
Mobile Scissor-Lift Tables

■ Push button lift control

Raise loads faster and with less physical effort than manual lift tables. Scissor-style support frame lets the platform be raised or lowered to a wider range of heights than post-lift tables. Platform sits close to the ground when fully lowered, for easier loading of heavy items. Tables have brakes or floor locks that can be engaged to prevent them from moving unexpectedly. An electric motor activates the hydraulic lifting mechanism to raise the platform. Motor is powered by a rechargeable battery and controlled with a push button. Must be pushed or pulled manually.

**Quiet and Precise tables** have a linear actuator that raises or lowers the platform more quickly, quietly, and accurately than tables with hydraulic or hand-crank lifting mechanisms. Used in areas where noise must be kept to a minimum, such as high-tech manufacturing, retail stores, offices, and medical facilities. Battery-powered actuator is controlled with a push button.
