

1-800-GRAINGER (472-4643)

Open Head Pails

Use for easy transport and storage of liquids and solids. Compatible lids can be ordered separately.

Plastic pails are lightweight and resist corrosion, impact, and damage from ultraviolet (UV).

Stainless steel pails withstand high temperatures and resist corrosion, rust, and scratches. Ideal for applications

where moisture or bacteria growth is a concern, such as food processing, industrial manufacturing, and outdoor environments.

Steel pails withstand extreme temperatures and heavy loads. Suitable for hot/cold liquids, semi-solids, and solids. Commonly used for shipping or storage of non-food items.

Open Head Pails with Lids

Pails come with a compatible lid to keep contents secure and uncontaminated during transport and storage.

Screw-on lids have threads that connect with the pail's rim threading to tightly secure lid.

Snap-on lids squeeze around the pail's rim to make an airtight seal.

Lug covers have tabs around the edge of the rim that push into pails to seal a barrier between the rim and lid. Prevent spills, exposure, and tampering.

Lever lock covers have a horizontal lever attached to the rim that tightens to create a firm seal between the lid and pail.

Closed Head Pails for Liquids

Allow dispensing of liquids through an opening on the top. Tight-fitting lid allows them to hold contents securely, making them a preferred choice for air and overseas shipping of hazardous substances.

Plastic pails are lightweight and corrosion resistant.

Steel pails can withstand extreme temperatures and heavy loads. Suitable for hot/cold liquids, semi-solids, and oils.
