

### Shelf and Utility Cart Selection Guide

**MATERIAL**

- **Metal:** Metal shelf and utility carts are more rugged and typically can hold heavier loads than plastic shelf and utility carts.
- **Plastic:** Plastic shelf and utility carts are lighter and provide more resistance to dents, corrosion, and water damage than metal shelf and utility carts.

**HANDLES**

- **(2) Handles:** Front and rear handles allow cart to be pushed from either side when maneuvering in tight spaces.
- **Ergonomic Handle:** Provides comfortable grip.
- **Flat Handle:** Low-profile handle stays out of the way.
- **Raised Handle:** Provides comfortable hand placement and push height.
- **U-Shaped Handles:** Offer secure grip when climbing ladders on vertical-access carts.

**SHELVES**

- **Adjustable Shelf:** Shelf can be raised or lowered to accommodate items of different sizes.
- **Compartmented Shelf:** Deep compartments keep containers of chemicals stable and capture spills.
- **Deep-Lipped Shelf:** Tall lip contains spills and better protects against items sliding off the shelf than a shorter lip.
- **Fixed Shelf:** Shelf cannot be moved.
- **Flush Shelf:** Flush sides let items slide onto or off of the shelf.
- **Lipped Shelf:** Short lip stops items from sliding off shelf, and heavy items don't need to be lifted far to clear the lip.

- **Perforated Shelf:** Small openings on shelf surface let liquid and debris fall through, which helps keep the shelf clean.
- **Removable Shelf:** Shelf can be removed for cleaning or to accommodate tall items.
- **Shelf with Lipped Guards:** Tall guards run along the length and width of the shelf to prevent items from sliding off it.
- **Single-Side Flush Shelf:** One flush side lets items slide onto or off of the shelf, and three lipped sides stop items from falling off the shelf.

**Deep Lipped Shelf w/ Flat Handle**
