## Metal Shelf and Utility Carts with Ventilated Walls

Metal mesh walls surround the top shelf on these carts to provide maximum protection against items falling off the shelf while the carts are moving. The mesh walls also allow air to flow through them for ventilation and let users see items on the shelf. The carts have a lipped bottom shelf.

Load Capacity	Shelf Length	Shelf Width	Overall Length	Overall Width	Overall Height	Distance Between Shelves	Item No.

## Low-Profile Metal Shelf and Utility Carts

The top shelf on these carts is set at a lower height than other styles of metal shelf and utility carts. This reduces how far bulky or heavy items must be lifted when loading them onto the top shelf. **Easy access and load** carts have two rear corner posts and a front central pillar that support the carts' top shelf and reduce obstructions when moving items onto or off of the carts. They also have flush tube shelves that let items slide onto or off of the shelves and allow dirt and debris to fall through the spaces between the tubes.

## Flow-Through Metal Shelf and Utility Carts

These flow-through utility carts have metal shelves with openings that let debris and liquid fall through them, which helps keep the carts clean when used in dirty or wet areas. **Perforated** shelves have small holes. **Slotted** shelves have long vertical openings.
