Maintenance-Free Plate Casters

Casters have sealed precision ball bearings in their swivel raceways and wheels that do not need to be routinely greased, which reduces time spent on maintenance and helps extend the casters' life. Casters roll quietly and require minimal force to start and keep them rolling. **Medium-duty** casters have zinc-plated steel frames and are used on carts, racks, and similar equipment that will be carrying moderately heavy to heavy loads over flat, smooth surfaces. **Shock-absorbing** casters have spoked wheels that absorb and distribute shock to prevent damage to the caster and minimize noise while rolling. **Heavy-duty** casters have zinc-plated steel frames and can bear heavier loads, tolerate more frequent use, and withstand more shock and impact than medium-duty casters. Suitable for carts, trucks, towline fixtures, and other equipment that will be pushed manually or towed by powered equipment in manufacturing, aerospace and automotive assembly, warehouses, and similar industrial applications.

CAD DRAWINGS Available Online

Grainger's CAD capability lets you download 2D drawings and 3D CAD files in your choice of format.

Shock-Absorbing Plate Casters

Casters have spring-loaded suspensions that absorb shock and vibration when rolling over obstacles or rough terrain, and help prevent damage to equipment as well as any shock- or vibration-sensitive cargo that is being transported. Suspensions can be adjusted to achieve the smoothest ride possible. **Quiet-roll** casters provide smooth, quiet rolling in areas where noise levels are a concern. **Medium-duty** casters are used on carts, trucks, racks, and trolleys that will be moving moderately heavy loads in manufacturing plants, laboratories, and computer and networking rooms. **Heavy-duty** casters can withstand heavier loads and more frequent use than medium-duty casters. Used on racks, trolleys, and fixtures in manufacturing plants, computer and networking rooms, sound and lighting applications, and other industrial settings. **Extra-heavy-duty** casters can bear very heavy loads and withstand more shock and impact than heavy-duty casters. Used on airport ground-support equipment, assembly line dollies, and production equipment in manufacturing plants and other industrial environments.
