## Friction-Ring Stem Casters

Caster stem presses into an appropriately sized hole or socket in tubes, pipes, wood, or brackets on furniture and equipment. A spring ring at the end of the stem expands to hold the caster in place once it's installed. Require minimal or no tools for installation. Suitable for applications where casters need to be replaced frequently. All are swivel casters that can rotate 360°. **General purpose** are for use on carts, furniture, storage cabinets, storage bins, display stands, retail fixtures, and other equipment in a wide variety of settings. **Wall-protecting** have rubber rings that protect walls and other surfaces from damage if the casters collide with them.

## Bolt-In Stem Casters

Castors have a round or square stem that fits into structural framing made of metal tubing or angle iron. Caster is held in place with a bolt or pin that is installed into cross-drilled mounting holes in the framing and the caster's stem. **Round stem** fit into round metal tubing on light-duty scaffolding, work platforms, workbenches, and tables. **Square stem** fit into square or octagonal metal tubing or angle iron on carts, racks, and similar equipment.
