Panel Trucks

The frame on these trucks supports long, thin panels or sheets. Also known as drywall carts, these trucks are used to store or move items such as drywall, plywood, glass panels, and partitions. The trucks' flush platform lets items slide onto and off of the carts during loading and unloading. All have two swivel and two rigid casters, unless noted otherwise. **A-frame** and **sloped-frame** trucks allow panels to lean toward the trucks' center to keep them balanced during transport. Sloped-frame trucks can be loaded from one side. A-frame trucks can be loaded from two sides. **Single-height vertical** trucks keep panels oriented at 90° to the trucks' deck and are all the same height. **Adjustable rails** can be repositioned or removed to make room for items of different sizes and save space when storing the trucks. **Fixed rails** uprights cannot be moved. **Nonmarring rails** have a vinyl coating that helps prevent damage to delicate finishes or surfaces.

V-Groove Cradle-Style Bar and Pipe Truck

V-shaped cradle holds large sizes or bundles of long materials and prevents round items from rolling off the truck. Also known as a bar and pipe dolly and big-wheel cradle truck, this truck has two large pneumatic wheels that can roll over rough terrain or flooring. The truck's T-handle is used to push the truck and control its movement, and it is offset so the operator walks alongside the truck instead of behind it.

Load Capacity	Overall Length	Overall Width	Overall Height	Deck Height	Item No.
1,200 lb	58 in	34 1/2 in	36 in	17 in	19C219

Table Carts

Vertical divider rails span the length of these carts to support round and rectangular tables that are being transported on the carts. The rails can be removed to reduce effort during loading and unloading. The carts' frames have been coated with smooth vinyl to prevent damage to tables on the carts.
