

Dolly Material Information

Aluminum dollies resist corrosion and are lighter than steel dollies.
Fiberwood dollies weigh less than wood dollies. They are less noisy and less likely to damage delicate materials or surface finishes than metal dollies.
Plastic dollies are lighter, more resistant to dents, and easier to clean than metal or wood dollies.

Steel dollies are more resistant to cracks and scratches than aluminum, wood, or plastic dollies.
Wood dollies make less noise and are less likely to damage delicate materials or surface finishes than metal dollies.

HAMILTON

Open-Deck General Purpose Dollies

Large open space in the middle of the deck prevents debris from collecting. Open center allows dollies to be hung when not in use. Open-deck dollies weigh less and are easier to carry than solid-deck dollies.

Solid-Deck General Purpose Dollies

Solid deck prevents small items from falling through. Can support bags and other irregularly shaped loads.
