Sheet Racks

■ Steel frames

Store long, thin panels or sheets such as drywall and plywood. They have vertical uprights or horizontal dividers that support items on the racks and keep them separated for organized storage. These racks are used in building supply stores, maintenance facilities, and other areas where panel and sheet goods are stored.

Tire Racks

- 2000-lb. capacity per shelf
- Gray powder coated finish

Tire racks hold tires and keep them off the floor and organized during storage. The racks provide efficient use of vertical space when storing tires in auto repair shops, car manufacturing facilities, and tire retail stores. These racks have vertical uprights and horizontal beams that connect to the uprights to create storage levels on the racks. The beams have rivets that fit into holes on the uprights, and the racks assemble without tools or bolts. **Double-sided racks** each consist of two single-sided racks that are joined with tie beams to create a double-sided rack that holds tires on both sides. Standalone racks cannot be expanded with add-on units, but multiple units can be placed side-by-side, if desired.

Heavy-Duty Reel & Spool Racks

Steel rack frames with axle brackets accept compatible spindles or rods that hold reels and spools of material on the racks. The position of the axle brackets can be changed to accommodate different sizes of spools and reels. These racks hold multiple reels and spools and keep them organized and accessible. Starter units can be used on their own as standalone racks. Add-on units can be connected to existing starter units or add-on units to expand them, and they cannot be used on their own as standalone racks.

Gas Cylinder Racks

Floor-standing racks keep gas cylinders organized and secure during storage. They are used in hospitals, manufacturing plants, and other locations where gas cylinders are used.

Horizontal gas cylinder racks have a frame with beams and crossbars that form shelving levels for holding propane cylinders in a horizontal position. Also known as propane cages, the racks have a door that can be locked to control access to the cylinders.

Vertical gas cylinder racks keep gas cylinders upright and secure during storage. They have vertical uprights that support the cylinders and keep them organized in rows. They also have chains that keep the cylinders secure inside the racks. The racks stand on a floor.
