Press-Fit Stationary Plastic Shelving

Plastic shelving units weigh less than metal shelving units and will not rust. The parts of the shelving units are pressed together to connect. No tools are required for assembly, although a rubber mallet can be used to ensure a tight connection. Compact shelving units have a narrow footprint and take up less floor space than other styles.

Containment Trays—Spill trays install on top of shelves on compatible high-durability stationary plastic shelving units to prevent spilled liquids or leaks from dripping through the shelves and contaminating items stored on the shelves below the trays.

Quick-Adjust Antimicrobial Stationary Plastic Shelving

- 62" overall height
- 4 shelves adjust on 1" increments
- 800 lb. shelf capacity (based on evenly distributed loads)

Quick-adjust units have levers on their shelves that can be released to reposition the shelves without removing them from the posts or disturbing other shelves on the unit. The posts and shelf decks have been treated with an antimicrobial additive that prevents damaging, odor-causing mold, mildew, and bacteria from growing on them and helps keep them clean. Each shelf has a plastic deck that lifts out and can be placed in a dishwasher, making

these shelves easier to clean and sanitize than standard plastic shelves. Assemble without tools and use corner wedges to anchor the shelves in place on the posts. Ideal for use in kitchens, medical facilities, and other areas where high standards of cleanliness must be maintained. NSF Listed.
