

## Bolted Structural Channel Pallet Rack Components

- Fully welded steel construction
- Powder-coat finish resists chips and chemicals

**Upright Frames**—Hot-rolled structural channel columns are specially punched for 2" beam adjustability. Full horizontal and diagonal bracing increases frame strength. 7-ga. baseplate welded to column disperses floor load and increases stability. Multiple anchor holes allow easy floor mounting. Precaution Blue color.

**Beams**—Made with high-strength structural steel (50,000 psi min.) for superior rigidity and durability. Feature 2-bolt beam connections and 7-ga. wraparound connector plate to help square rack into position and create a tighter connection. Yellow color.

Cross bars are sold separately.

## Lynx® Roll-Formed Pallet Rack Components

- Fully-welded steel construction
- Upright frames and step beams are sold separately to allow for custom configurations
- Boltless assembly
- Corrosion-resistant polyurethane finish
- Accessories can be found on page 1242

**Welded Upright Frames**—Angle keyhole-slotted punch pattern every 3". Horizontally and diagonally braced frame creates a strong, stable upright system. Prepunched footplates for easy anchoring. Gray color.

**Beams**—Install without tools. The 3-prong connector features a front engaged spring-loaded safety clip that seats in the upright frame. Yellow color.
