

## Flow Cell Gravity Flow Racks

- Blue racks with 14-ga. shelves & 12-ga. posts
- Boltless racks have a 3000-lb. capacity per shelf; bolt-together racks have a 1000-lb. capacity per shelf

Stationary flow racks are suitable for areas where they will not be moved often. The racks have multiple storage levels with skate wheels, rollers, or decking that allow items at the back of the racks to glide forward as items at the front of the racks are removed. Choose racks that bolt together for assembly or boltless flow racks do not require bolts or special tools to assemble.

<b>Skate Wheel Track Workstations</b>							
3 Shelves	72 in	96 in	72 in	46KG04	—	—	—

**Roller Track** - Rows of rollers provide a stable surface for moving loads with rimmed or uneven bottoms, such as kegs, pallets, and bags. Each level has a flat, flush front edge, making these flow racks suitable for conveying full cases and other unopened items.

**Skate Wheel Track** - Closely spaced rows of skate wheels allow boxes, totes, and other loads with firm, flat bottoms to glide on the racks. Skate wheel tracks spread the weight of conveyed items across a wider area than skate wheel rails, and they can support items in a range of sizes. Each level has a flat, flush front edge, making these flow racks suitable for conveying full cases and other unopened items.

**Knuckled Racks** - Each level has a sloped front edge that presents items at the front of the rack at a downward angle, making these flow racks suitable for applications where workers need to reach into open containers on the racks to pick items directly from the containers.

**Flow Rack Workstations** - A worktable provides a flat surface for performing inspection, assembly, and other work tasks on items picked from the rack. The racks also have a return lane underneath the worktable for returning empty containers.

## Solid-Deck Boltless Stationary Flow Racks

- 20-ga. shelves with 22-ga. posts
- 550-lb. capacity per shelf

Solid decking prevents small parts from falling through the shelves and will not snag items on the shelves. It also stops dirt and debris from falling through the shelves and contaminating items on lower levels. Boltless flow racks do not require bolts or special tools to assemble.

**Flat decks** are not tilted, so items at the back of the racks' shelves will not put weight on items at the front of the shelves if multiple items are lined up in a row, which helps prevent damage if there are heavy or compressible items on the shelves.

**Tilted decking** allows gravity to move items at the back of the racks forward as items at the front of the racks are picked.

**Flat Deck**

## Freestanding Vertical Bar Rack

- Gray powder-coated finish
  - 6000-lb. capacity
- Easy to access and organize bar stock and tubing. Vertical storage requires less floor space. Includes security chain and hooks.
