

## High-Temperature Process Totes

- Fiberglass reinforced composite construction
- Temperature range: -60°F to 250°F
- Stackable

Lightweight composite material is resistant to chemicals, rust, corrosion, and extremely high temperatures. Also resists most cutting oils, detergents, mild acids, and alkaline solutions. Can be used to house hot products, allowing them to cool down after they come off a production line, including metal parts, plastics, and glass. Compatible lids are ordered separately.

## Storage Trunks

Heavy-duty reinforced exteriors withstand impact and harsh weather conditions. Large capacities accommodate big or bulky items and protect them during transport and storage. Side handles for lifting and can accommodate padlock for security (padlock not included). All trunks have side hinged lids, except Plano Molding trunks have removable lids. Lids attach securely to hold contents when transporting valuable stage equipment, power tools, outdoor gear, or tradeshow materials.

Rolling trunks have wheels for mobility. Pelican, J. Terence Thompson and Suncoast trunks have 2 wheels to lift at one end and pull at an angled position. Myton Industries trunks have 4 wheels to roll across flat surfaces.
