**Shop Stools**

Shop stools are typically taller than office chairs or task seats. They provide workers with a place to sit at counters, shop desks, and other work areas. These products help improve worker comfort in industrial areas such as garages, receiving departments, manufacturing plants, and loading docks. Swivel models let users turn while seated. Stationary shop stools will not roll during use.

**Ergonomic Swivel Mobile Shop Stools** have memory foam seats that provide more comfort than standard hard stool seats when sitting for long periods of time. These mobile shop stools have casters that allow them to roll when desired.

**Low-Profile Non-Swivel Stationary Shop Stools** are less tall than other types of shop stools.
