

## Cast-Iron Pipe Fittings and Pipe

### PIPE FITTINGS

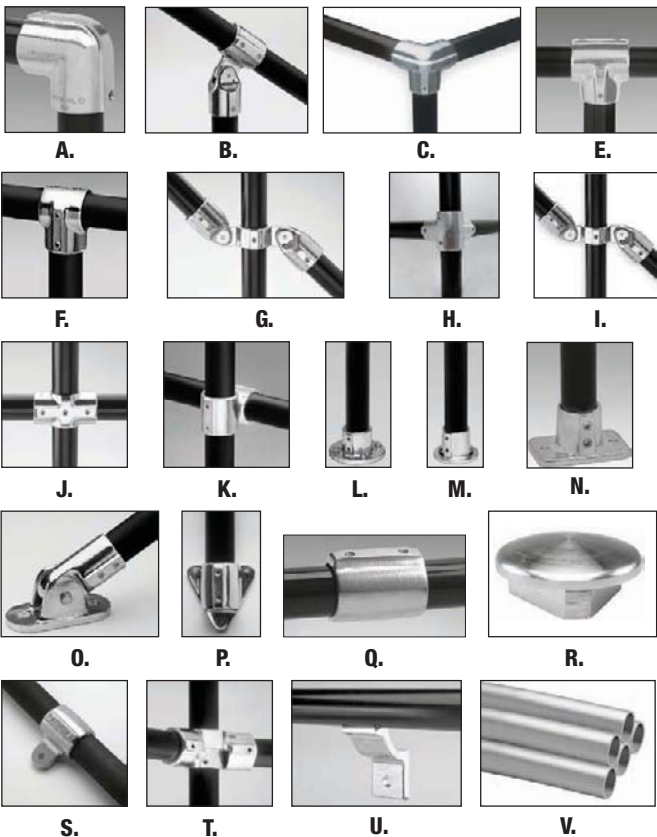

Galvanized iron pipe fittings have a tensile strength of no more than 50,000 lb. Manufactured per international standards for durability and corrosion resistance. Feature quality set screws with antirust coating. Fittings build with no welding required; pipe cutters and a standard hex tool are usually the only tools needed. Constructed to ASTM Standards.

### PIPE

Pipe is welded and hot-dipped galvanized for corrosion resistance. Tensile strength of 30,000 lb. Constructed to ASTM Standards.

## Aluminum Slip-On Pipe Fittings and Pipe

**Hollaender**  
Your Handrail Source.

### Corrosion-resistant, nonmagnetic, nonsparking

Rugged fittings are as strong as malleable iron, but only 1/3 the weight. The 535 alloy aluminum fittings are suitable for use with aluminum pipe, black iron, galvanized carbon steel, or stainless steel with no electrolytic corrosion. You can easily assemble the railing and structure with just a standard hex key. Innovative set screw design can drastically reduce loosening

caused by vibration, and they can resist pull-out and rotational slip. All pipe is anodized aluminum. OSHA, IBC, BOCA, SBC, and UBC Compliant.
