Water-Activated Manual Kraft Tape Machines

Machines automatically apply water to Kraft tape, activating the tape's glue. They include a dial for manual selection of tape length and a lever for dispensing the tape. Commonly used for low-volume Kraft tape applications.

Water-Activated Electric Kraft Tape Machines

Machines automatically apply water to Kraft tape, activating the tape's glue. They require the push of a button to select the desired tape length. No dials or levers are necessary. This method requires less strain for the user than a manual Kraft tape machine.

Water-Activated Kraft Tapes

Water-activated Kraft tape, also known as reinforced tape, is run through a tape machine that applies water, activating the glue on the tape. It is made of reinforced fiberglass strings that are difficult to tear apart. A box cutter or utility knife is required to cut the tape.

Packaging Tables

- Min. tabletop height: 30"
- Max. tabletop height: 36"

Packaging tables are used by employees in warehouses as a workspace for wrapping and taping boxes, mailers, and tubes for shipment.

Laminate-Top—Tables resist scratches and stains. Laminate is lightweight, nonconductive, and can be cleaned easily in the event of a spill.

Particle Board-Top—Used for light- and medium-weight packaging applications. They resist denting and distortion and are easy to clean.

Solid Maple-Top—These tops are more durable than particle board tops and are used for high-volume medium- and heavy-weight applications.

Cardboard Storage Stand—Optional stand keeps boxes clean and off the floor. Compatible with PRO-LINE benches.
