## Corrosion Inhibiting VCI Paper Rolls

Heavy packaging paper can be cut or torn to size. Rolls fit in a dispenser for use at a packing station. The paper wraps metal parts for shipment and storage, and it prevents rust from building up on items.

Basis Weight	Roll Width	Roll Length	Roll Weight	Brand	Item No.	Pkg. Qty.

## Corrosion Inhibiting VCI Paper Sheets

Heavy packaging paper comes in presized stacks. Paper sheets wrap small metal parts for shipping or storage. They keep moisture out and prevent rust from forming on items.

## Corrosion Inhibiting VCI Stretch Wrap

VCI (volatile corrosion inhibiting) film is wrapped around a bundle or pallet to protect machinery and ferrous parts where corrosion of metal parts is a concern. **Hand-grade wrap** can be applied with or without a handheld dispenser. The worker applies the wrap by holding the roll and walking around the bundle. These rolls are smaller than machine-grade wrap rolls, making them easier to transport around a facility. It is used in low- to moderate-volume wrapping applications. **Machine-grade wrap** is installed on a stretch wrap machine. It comes on larger, heavier rolls than hand-grade wrap. Opaque stretch wrap cannot be seen through, which provides added security by hiding product labels when shipping sensitive or valuable items.

## Corrosion Inhibiting VCI Pads

Foam pads are infused with a volatile corrosion inhibitor for preventing rust. They can be placed in or between fragile metal items or electronic components to cushion them during transit or storage. VCI pads prevent moisture from accumulating on fragile metal parts that would cause water damage or rust.

W	L	Area Protected	Pads per Case	Thickness	Item No.	Pkg. Qty.
