PAC Strapping Products Inc.   **SIGNODE**

Semi-Automatic Strapping Machines

These machines tension and heat-seal plastic strapping in medium- to high-volume shipping applications, such as loading docks and fulfillment centers. These machines require the operator to feed the strapping around the package. They speed processing and reduce operator fatigue by eliminating the need for workers to manually tension and seal strapping.

Edge and Corner Protectors

Edge and corner packaging protection helps safeguard large packaging from dents and damage during shipment or storage. They are placed on and around boxes and containers to help stabilize and protect items.
