

Scotch 3M

Machine Length Hot Melt Packaging Tapes

Tape instantly sticks to boxes, mailers, and tubes for an immediate seal. It resists tearing, splitting, and ripping and releases quicker off the roll than acrylic tape. Material withstands high temperatures and has outstanding holding power and tensile strength. For use with case sealer machines only, and will not fit on a hand or counter dispenser.

Clear Machine Length Hot Melt Tapes—Tape will not yellow. It is commonly used for sealing white and other colored boxes, tubes, and mailers.

Tan Machine Length Hot Melt Tapes—Tape blends in with Kraft-colored boxes, mailers, and tubes.

Bag Sealing Tapes

- 3/4" tape width
- 2.4 mil tape thickness
- UPVC backing material

Tapes are a method of sealing poly bags. The tape is most commonly used with open-ended poly bags.

Manual Packaging Label Applicators & Dispensers

Label Applicators—Dispense and apply labels to packages or products. They provide consistent label placement in high-volume, repetitive labeling tasks.

Label Dispensers—Peel away the label from its backing as the label is dispensed. They are used in small- to medium-volume labeling tasks.

Standard Packaging Benchtop Tape Machines

- For 3" dia. core

Benchtop tape machines, also known as box sealers, apply tape to the top and bottom of cardboard cases. They are compact for use on a tabletop and do not utilize a conveyor. The tape size needed is preselected by the user. These machines are most commonly used for sealing regular slotted containers (RSC).

Bag Sealing Tape Dispensers

- For 3" core dia.

Dispensers mount to a countertop, bench, or workstation. The dispenser is used to place tape around the bundled end of a bag. It automatically measures and cuts tape when the bag is inserted. The seal eliminates the need for twist tying.

Electric Packaging Label Dispensers

Label Dispensers—Automatically dispense packaging labels and peel away the label from its backing as the label is dispensed for efficient package labeling. They keep the labels organized and ready for use when labeling packages and shipping containers.

Label Rewinders—Automatically rewind liner scrap and remove paper, vinyl, and polyester from liner. They unwind and rewind labels for proper orientation. They roll labels onto a roll core as they are dispensed from a thermal transfer printer or reel.
