Barcode Label Printers

Label printers use heat to print barcodes and other useful information on direct transfer or thermal transfer labels. They let users create custom labels with barcodes, addresses, company logos, and other information for shipping, tracking, inventory, product identification, and barcode pricing applications.

DESKTOP BARCODE LABEL PRINTERS

ZD420 Series—Uses both standard ribbon and cartridge. It alerts the user when a ribbon needs replacing. **ZD620 Series—**Features a three-button interface with five LED status icons or an optional 10-button interface with color LCD display.

INDUSTRIAL BARCODE LABEL PRINTERS

ZT411 Series—Printer performs both thermal transfer and direct thermal printing. It has a side-loading metal print mechanism and toolless printhead replacement. Metal media cover has enlarged clear viewing window. A bi-fold media door decreases overall operating space. **ZT510 Seres—**Features a customizable, back-lit multiline graphic LCD display with intuitive menu and keypad for quick operation. It is capable of thermal transfer and direct thermal printing.

MOBILE BARCODE PRINTERS

ZQ320 Series—3" printer for labels, receipts or both. It has scuff-resistant, durable housing that can withstand outdoor elements. Printer uptime is improved with monitoring and troubleshooting capability in real-time from a remote central location. **ZQ510 Series—**Used for 3" receipt printing and has

military-grade durability to withstand significant drops to concrete, sprayed liquids, and dirt. It has large buttons and a user-friendly interface for easy operation, even when wearing gloves. **ZQ630 Series—**Features radio-frequency identification (RFID) technology and large color graphics display. Wake-up feature allows the printer to enter sleep mode when idle and wake up when the user presses the print button. Roaming technology ensures that there is always a dependable internet connection.

ShockWatch Indicator Companion

Damage Indicators

Shock indicators provide clear visual indication if a shipment has been dropped or otherwise exposed to an impact force that exceeds a predetermined level.

Drop N Tell Indicators are self-stick damage indicators that attach to shipping containers. They come with warning labels that are also applied to the shipping container to give clear instructions for receiving the shipment if mishandling has occurred during transportation.

ShockDot Indicators are always activated and include a QR code for traceability.

ShockWatch Indicators can be used with compatible companion labels that are also applied to the shipping container to give clear instructions for receiving the shipment if mishandling has occurred during transportation.

ShockWatch 2 Indicators are field-armable to eliminate activation until impact detection is needed.

ShockWatch Indicator Companion labels are used on shipments that contain ShockWatch brand shock indicators. The labels instruct people how to handle the shipment and receive it if damage is indicated on the ShockWatch indicator. The companion label is placed on the shipping container and then the ShockWatch label is placed over the companion label, as indicated by the illustration on the companion label.
