Packing Peanuts

S-shaped peanut
 Reusable, loose packing peanuts fill excess space in a container around a product and provide some protection against damage during transit for items that are not fragile.

Recycled Polystyrene Peanuts—
 Dissolve in water. Reusable.

Biodegradable Peanuts—For packages that will not be exposed to moisture. 100% recycled fill is reusable and static-free. Will not chip or dust.

Anti-Static Peanuts—Are made of material that does not accumulate static electricity, so they are a good choice for filling space in containers around electronics or computers. They reduce the risk of electrostatic discharge, which can damage fragile electronic components.

Virgin Polystyrene—Peanuts are reusable loose packing material.

Instant Foam Packaging

The foam relies on pressure to form into the shape of items in a container. It doesn't need to be warmed and works faster than foam that requires heat. It is supplied in a bag containing two compounds. When mixed with pressure, the compounds harden into foam that surrounds the item in the box and fills all void space.
