WRAP  
DISPENSER

## Stretch Wrap Dispensers

These dispensers hold stretch wrap rolls, making it easier and quicker to manually apply stretch wrap to pallets and bundles.

**Bar Handle Dispensers**—Ergonomic handle and grip provide two-handed control when applying wrap. These dispensers are used with larger hand-grade stretch wrap, usually rolls 12" to 20" wide. Handles protect hands from sharp core material and reduce hand fatigue and strain.

**Rope Applicators**—These applicators apply wrap at full width and have an attachment that can be used to compress the full-width stretch wrap to the thickness of a rope. Stretch rope provides added stability over full-width wrap alone when bundling large or heavy loads.

**Stand Up Bar Handles**—Long handle allows workers to apply stretch wrap at the bottom of the pallet without stooping or bending at the waist or reaching up to wrap the top of tall pallets. They hold larger stretch wrap rolls, usually 12" to 20" wide.

**Reusable Mini-Wrap Handles**—Reusable handle and rotating mount allow workers to apply stretch wrap with one hand. The handle protects hands from the sharp edges of the core, reduces hand fatigue, and speeds application. Reusable mini-wrap handles are used with narrow stretch wrap rolls, generally 2" to 5" wide.

**Orbital Bundler Dispensers**—Manually-operated dispensers hold bundles off the ground while stretch wrap is applied vertically around the bundle. They can hold regular or irregularly shaped bundles. Arms can be adjusted vertically and horizontally to ensure bundles of different sizes are centered when wrapping.

**End Caps**—Caps are inserted into the stretch wrap roll core and protrude slightly from the core to provide a smooth surface that protects workers' hands from cuts and abrasions caused by sharp core edges. End caps can be removed and reused.

## WESTWARD HIGHLIGHT Stretch Film Cutters

Handheld cutters slice through stretch wrap, bubble rolls, paper, and twine from packages and bundles. They have a recessed blade that cuts long lengths without the stretch wrap jamming the blade. They are also used to cut wrapping from the roll or remove stretch wrap from a bundle.

## Stretch Wrap Machines, Turntables, and Ramps

**Machines**—Rotate the product and apply wrap in one operation, eliminating the need for workers to walk around a pallet, reducing worker fatigue, and freeing them up for other tasks. Use them on loading docks and in storage facilities to wrap pallets with uniform or irregular sides.

**Turntables**—Electric turntable holds the bundle and slowly rotates while workers stand in one place and hold the wrap. Use

stretch wrap turntables on loading docks and in storage facilities to wrap pallets with uniform or irregular sides.

**Ramps**—Ramps allow operators to use a pallet jack to load heavy pallets onto stretch wrap machines and remove the pallet when wrapping is complete. The jack is pushed up the ramp, providing quick access to the machine table.
