

Bucket/Mop Bucket Definitions

Plastic is lightweight, easy to transport, and resistant to chemicals and rust.
Galvanized steel is highly durable with excellent rust, corrosion, water, and chemical resistance.

Anti-spill mop buckets feature interior baffles which dissipate waves quickly, preventing liquids from spilling over the rim of the bucket as it is moved through a building.

Plastic Cleaning Buckets

■ Include handle

Buckets transport cleaning solutions and water around a facility. Plastic construction is chemical resistant.

3U453 has indentations on 2 corners for easy pouring and an ergonomic handle.

52HT98 is a five-piece bucket and caddy set that includes a four-gallon bucket, utility scrubber, all-purpose scrubber, carrying caddy for cleaning supplies, and a shammy towel that can be cut to size.
