

String Mops and Heads Definitions

String Style

Strip Style

Tube Style

MOP STYLE:

String mops are made of individual strands of natural or synthetic fibers. Used for general floor cleaning and spill absorption on smooth floors.

Strip mops are made of thick, flat strands of highly durable microfiber, suitable for smooth and rough surfaces.

Tube mops are made of highly durable round microfiber tubes, designed to reduce friction, water use, and streaking while performing heavy scrubbing on most surfaces.

MOP HEAD SIZE:

Extra small

weighs 12 oz. or less.

Small

weighs 13 oz. to 16 oz.

Medium

weighs 17 oz. to 20 oz.

Large

weighs 21 oz. to 26 oz.

Extra large

weighs 27 oz. or more.

Dry Weight describes the size of a mop head before exposure to liquids. Mop heads with higher dry weights are larger in size than lower dry weight mop heads.

MOP HEAD MATERIAL:

Cotton is highly absorbent and used for floor cleaning and spill pickup.

Cotton/synthetic blend is a combination of natural cotton and man-made fibers with increased strength and durability, reduced lint deposits, and increased mildew resistance.

Microfiber is highly absorbent and features extremely fine fibers to trap debris, bacteria, and viruses with or without the use of chemicals.

Polyester is highly absorbent and durable. Polyester can be washed and reused, dries quickly and is resistant to mold and mildew growth.

Rayon is a semi-synthetic fiber featuring high absorbency and release qualities for even application of floor finishes and disinfectants.

Rayon/synthetic blend is a blend of cellulose-based and man-made fibers resulting in highly durable, low-linting mop heads which are absorbent, fast drying, resistant to disinfectants, and have efficient release properties for floor finishing.

Synthetic is produced from man-made fibers featuring high strength, low lint, and resilience to bleach and disinfectants.

Permanent

Snap On

Threaded

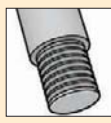

Tie On

Slide On

Clamp On

Screw On

STRING MOP CONNECTION TYPE:

Permanent connections are inseparable. The mop and handle are a single unit, designed to be consumed and replaced together.

Snap-on connects to a compatible mop frame without the use of tools.

Threaded connects to compatible female threaded mops, twisting securely into place.

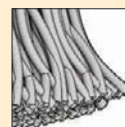

Tie-on connections are made by tying string or cord by hand, securely attaching a mop head to a compatible mop handle or frame.

STRING MOP HEAD CONNECTION TYPE:

Slide-on attaches the mop head to the handle through a hinged opening on the side or through the front of the connection opening. A wing nut further secures compatible mop heads.

Clamp-on tightens a set of jaws by twisting the collar at the base of the handle, setting the grip pressure to the desired amount on compatible mop heads.

Screw-on attaches a female threaded handle to a compatible male threaded mop head.

Cut End Type

Loop End Type

MOP END TYPE:

Cut is a design featuring exposed cut ends of the strings making up the mop head. Cut-end mop heads are primarily disposable.

Loop is a design featuring a loop at the end of each string making up the mop head. Looped ends reduce tangles during laundering and increase durability.

INCLUDES WET MOP TAILBAND:

Wet Mop tailbands are reinforcing strips woven or sewn across the face of select wet mop heads. They maintain the alignment of mop strings and tubes to prevent tangles and improve spread and floor contact. Tailbands increase the launderability and service life of a mop head.

String & Strip Mops

String mop head and handle kits include a string mop head and a compatible handle. The mop head is made of individual strings attached at the headband to evenly apply a cleaning solution and quickly absorb spills. Correctional facility mop kits have wire-free connections. **Strip mop** is antibacterial and includes a power wringer.
