

Find more Broom information on page 1483.

Push-to-Center Brooms

- Standard threaded handle connection

An angled broom head design helps center debris, keeping it from falling out the sides and creating a centralized pile for easy cleanup. They sweep large indoor and outdoor areas including decks, classroom floors, store aisles, and gymnasium floors.

Angle Brooms

- Standard threaded handle connection

Angled bristles sweep debris from narrow spaces under furniture and machinery. Bristles are cut at a sharp angle to reach into corners and other tight spaces in classrooms, hospitals, and machine shops.

Lobby Brooms

- Standard threaded handle connection

Brooms have a wide head for one-handed sweeping and cleaning under tables, fixtures, and hard-to-reach areas in theaters, lobbies, and breakrooms. Bristles are typically shorter and flat across the head for sweeping debris into a long-handle dust pan. Dust Pans sold separately on page 1487.

Corn Brooms

Brooms sweep fine dirt and heavy debris from most dry surfaces. They have long stiff corn or synthetic bristles that are stitched to maintain the broom shape for everyday use on sidewalks and in garages and basements. The long handles allow users to stand upright while sweeping.
