Dust Pan Measurements

Dust Pans

**Handheld dust pans** are used in combination with brooms and handheld brushes to push dirt and debris into the pan. Short-handled dust pans are for everyday use and where space is tight.

**Long-handle dust pans** stay upright while scooping up dirt and debris. They allow for faster cleanup and help avoid back strain.

**Long-handle dust pans with lids** make it easy to sweep up dirt and debris, carry it, and empty without spilling. Lids are self-closing. The upright dust pans allow faster cleanup, fewer spills, and less bending to avoid back strain.

**Jumbo dust pans** have an oversized scoop for bigger cleanups with less trips to the disposal. They are compatible with wider brooms.

**Nonsparking handheld dust pans** are designed for use in areas where flammable vapors and combustible products are present. Nonmagnetic dust pans won't create a spark when cleaning in areas where hazards are present, and protect employees and equipment during maintenance and repair work.

Broom/Brush & Dust Pan Sets

**Long handled broom and dust pan sets** sweep and pick up dirt and debris in public areas, breakrooms, and kitchens. Both the dust pan and the broom have long handles so users can stand upright while sweeping debris directly into the dust pan and reducing back strain.

**Handheld brush and dust pan sets** sweep up dirt and debris within arm's reach without getting hands dirty. The brush sweeps fine particles and debris off counters, tables, and machinery into the handheld dust pan and then locks into dust pan handle.
