Deck & Wall Brushes

All brushes have a standard connection thread type. **3H382, 3H381, 4KNC1, 4KNA8, and 1DU74** accept a threaded or tapered tip handle.

Deck and wall brushes remove stubborn dirt, sticky particles, and other debris from decks, floors, walls, and tiles. Durable bristles resist most chemicals and liquids found in cleaning agents.

Deck brushes clean around equipment and against walls to reach crevices and tight spots. They work with water and other liquid cleaning agents to keep surfaces clean.

Wall brushes simultaneously clean in two directions. Their angled shape cleans the area where the wall meets the floor and under machines and equipment. Durable bristles are gentle enough to be used on equipment. They are well suited for moist environments found in foodservice and processing facilities.

Grout and baseboard brushes have narrow heads with angled bristles to clean corners, edges, cracks, crevices, and grout lines. They clean and remove mold, mildew, and stains from tiled surfaces and baseboards in bathrooms, commercial kitchens, and food processing facilities.

Wire Scratch Brushes

Scratch brushes with wire bristles aggressively remove residue from metal parts or equipment in heavy manufacturing environments. Heavy-duty wire bristles clean threads, files, and castings and help remove rust, paint, scale, and solder without stripping the base metal.

Scratch brushes with scraper chip away at stubborn rust, paint, scale, and solder remnants on metal parts or heavy equipment. Durable wire bristles scratch off burs and debris from surfaces. They are commonly used in manufacturing environments including plating processes and metal finishing.

Nonsparking scratch brushes have phosphorus-bronze bristles that won't create a spark when cleaning metal surfaces in areas where flammable or explosive materials may be present. They protect employees and equipment during maintenance and repair work.

Oven/grill brush and scraper use wire bristles to remove heavy carbon deposits, rust, and food buildup from cooking surfaces. Brush options include short handles for close use, long handles to extend reach, and built-in scrapers to help remove debris.

Dusting Brushes

Brushes sweep away fine dust to large particles from benches, tables, counters, machines, and other surfaces. Can be used as a dust pan brush on floors. Horsehair bristles are most often used on polished or delicate surfaces. Synthetic bristles can be used for wet or dry applications.
