

Correct Handwashing Technique

Hands should be cleaned, at minimum, at the end of each work period, prior to breaks, and when visiting the bathroom. Developing good handwashing technique is essential to ensure hands are thoroughly clean. After hands are washed, it is also important to make sure that they are thoroughly rinsed and dried to help keep skin from chapping and cracking.

Proper technique includes the following:

Rub palm to palm

Rub palm over the back of the hand, fingers interlaced

Palm to palm fingers interlaced

Fingers interlocked into palms

Rotational rubbing of thumb clasped into palm

Rotational rubbing of clasped fingers into palm

Foam Dispensing Systems

Touch-free or manual dispensers automatically deliver the correct amount of hand soap. Lockable with large sight window for easy refill check.
