

Find more Degreasers on pages 2447 and 2448 in the Lubrication section.

Degreaser Information

BASE FORMULA DEFINITIONS

Water-Based

These degreasers use water as their primary solvent, plus detergents, emulsifiers, cleaning agents, surfactants, and other compounds, to dissolve soil or make contaminants more dissolvable in water.

Solvent-Based

Chemical-based degreasers use chemicals to remove petroleum, grease, dirt, and fatty oils.

Natural Solvent-Based

Natural degreasers use organic sources for their base including citrus, soybean oil, coconut oil, and ethyl lactate (renewable carbohydrates). Scents are lighter and fresher than solvent-based cleaners.

General Purpose Water-Based Degreasers

General purpose degreasers use water as the primary solvent to break down and lift off deposits of grease, oils, and dirt. They are biodegradable and commonly used to clean parts, machinery, and electrical components. Cleaner form is liquid for all degreasers, except 44F776 is a foam-dispensing gun cleaner that includes a spray adapter.

Container Size	Ready to Use/ Concentrated	Properties	VOC Content	Fragrance	Product Series	Brand	Item No.	Pkg. Qty.
Aerosol Spray Can								
20 oz	Ready to Use	Biodegradable, Butyl Free, Plastic Safe	10%	Characteristic	Pur-Fill	Todo!	44F776	1

Strong-Acting Solvent-Based Degreasers

Strong-acting industrial degreasers are more effective than general-purpose degreasers at cutting through the toughest petroleum greases and fatty oils. Solvent-based degreasers use natural (citrus, soy, or pine oil) or chemical-based solvents to break down and dissolve grease, oils, ink, grime, and adhesives. Degreasers clean and remove contaminants from tools, parts, and machinery.
