Corded Universal Silica Dust Extractors

- Wet/Dry pickup
- Plastic tank material

Extractors vacuum up silica dust, reducing respiratory hazards from airborne dust and preventing accumulation on floors, surfaces, and tools. Their universal hose connector attaches to the vacuum port on a compatible power tool, extractor attachment, or dust shroud. They draw in dust produced by cutting, drilling, grinding, or surfacing concrete, masonry, rock, and other materials containing silica. **Corded dust extractors with HEPA filtration** capture finer silica dust than non-HEPA filters. They filter 99.97% of particles as small as 0.3 microns. Models that are OSHA Table 1 compliant pair with a compatible tool and extractor attachment to mitigate silica dust to an acceptable level as set by OSHA's Respirable Crystalline Silica Standard 1926.1153. **Corded dust extractors without HEPA filtration** are more cost-effective but can't filter particles as fine as HEPA filters do. They are commonly used for jobs that don't require compliance with OSHA Table 1.
