Vacuum Filters

■ Reusable

Trap dust and allergens to keep them from recirculating in the air or entering the vacuum's motor. Filters are usually found near the vacuum's exhaust port to catch fine particles that haven't been collected in the vacuum bag or dirt cup. These filters are used for regularly replacing old filters to maintain suction and avoid motor burnout, and to change out clogged or damaged filters. Filters typically fit specific vacuum cleaner brands or models.

Vacuum Hoses

■ Plastic

Hoses attach to a vacuum cleaner's intake port to draw in dirt and debris. They connect with compatible attachments to extend their length or adapt to specialized jobs, such as cleaning crevices and upholstery. These vacuum cleaner hoses are used as replacements for hoses that are worn, damaged, or no longer maintain suction.

Description	Hose Dia.	Hose L	Color	Fits Vacuum Models	Brand	Item No.
