Bench & Floor Spray Booths

- 18-ga. galvanized sheet steel construction
- Tube axial exhaust fan
- 3-phase, TEFC, 1725 rpm, 60 Hz, tri-voltage motor with variable pitch pulley
- 48", 4-tube, 120/277V, fluorescent light fixtures, T8 color-corrected tubes included (6-tube fixtures available separately)

Paint booths are power-ventilated environments for spraying pressurized paint. They prevent paint spray inhalation by directing overspray to an exhaust system. They also

keep particles and contaminants from getting onto paint jobs. Paint booths are frequently used to paint boats, cars, planes, furniture, and equipment parts. **Bench-Style** spray booths stand upright at bench height and are used to spray smaller items. Booths are designed for either top- or rear-exhaust systems. **Floor-Style** paint booths have an open face and set up on the floor of an industrial or shop environment. Workers can move about freely inside them, and large equipment and items to be painted can be moved in and out of them.

Dirt Trap Surface Protection System

Non-Woven Fiber—Adhesive-backed, non-woven protection material protects paint booth walls and floor, traps dust, dirt, and overspray, and brightens work areas.

Dispensers—Hold rolls of surface-protection films for convenient dispensing. They are typically used in construction and painting applications to quickly apply film sheeting to walls and floors.

Spray Booth Air Filters & Liner Paper

Air Handler

Air Filter Pads & Rolls—Not only capture dust and particles in the paint booth's air stream, they also trap paint overspray to keep it from clogging the booth's fans, ducts, and motors or entering the surrounding air. They are commonly used in the automotive and manufacturing industries.

Liner Paper—Disposable papers designed to protect the walls and floors of spray booths, as well as parts of objects being painted from paint overspray.
