## Pneumatic Industrial Drum Vacuums

Drum vacuums operate on a compressed-air supply to suction dust and dirt or liquid spills into their drum for disposal. They withstand high-frequency use and reduce the risk of downtime since they have no electric motor to burn out. These air-powered vacuums are commonly connected to air compressors at construction sites or pneumatic hoses in manufacturing facilities.

## Static-Conductive Pneumatic Drum Vacuums

### Wet/Dry pickup

Drum vacuums with static-conductive components suppress the buildup of electrical charges, which can cause nuisance shocks. They're ideal for vacuuming talc, powders, and other substances that can generate static electricity. They operate on a compressed-air supply to suction

dust and dirt or liquid spills into their drum for disposal. These air-powered vacuums withstand high-frequency use and reduce the risk of downtime since they have no electric motor to burn out. They're commonly powered by air compressors at construction sites or pneumatic hoses in manufacturing facilities.
