Rust Tough and Rust Tough 250 Primer and Paint

• VOC content: < 250 g/L

Corrosion-resistant, direct-to-metal alkyd enamel. Protects against mild chemicals, fumes, oil, and grease stains. Excellent hide, color, and gloss retention. Superior chip, crack, and peel resistance. Rust Tough 250 performs like a traditional alkyd enamel. For use in moderate to severe industrial environments and is acceptable for use in federally inspected meat and poultry plants.

Industrial Primer

Heavy-duty primer offers good protection for steel in normal industrial environments. Industrial Primer is for interior and exterior use. Easy to apply by spray. Fast drying. Can be topcoated with alkyd and latex coatings. Weld-Thru Primer is rust inhibitive and designed for shop-priming structural steel. Excellent choice for where harsh environments put heavy performance demands on a shop-applied primer. May be welded through with no effect on the weld's integrity.
