

Spray Can Handles, Paint Applicators and Striping Machines

Description	For Use With	Item No.
Spray Grip	Aerosol Spray Can	2ERK5
Spray Comfort Grip	Aerosol Spray Can	2ERK6
Marking Wand/Steel/Plastic	Rustoleum Marking Paint and Chalk	6A379
Marking Wand/Aluminum/Plastic	Industrial Grade Paint	21CJ78
Striping Wand/Plastic	Aerosol Cans	32UT23
Marking Pistol	Rust-Oleum Inverted Marking Paint or Industrial Choice Precision-Line Inverted Marking Paint or Chalk	4CY42
Striping Machine, For Use With AF1600 System	Industrial Choice Athletic Field Striping Paint to Apply Straight 3 in to 6 in Wide Lines	4CY41
Striping Machine, For Use With S1600 System and 2300 System	Hard Hat and Industrial Choice Striping Paint, Aerosol Striping Paints to Apply Straight 2 to 4 in Wide Lines	6A940

Looking for more Line Striper Machines?

We have even more Line Striper Machines on pages 1627 and 1628 and on Grainger.com®

Heat Activated Pavement Markings

Thermoplastic pavement marking paints clearly mark traffic lanes, legends, symbols, and road boundaries on roads, parking lots, and other paved surfaces. They are thicker and more wear resistant than other types of marking paints. These paints are heated and applied to paved surfaces to increase visibility and provide long-term wear. Line rolls come in a variety of colors for varied road and pavement needs. These rolled strips can be applied to any roadway to delineate the lanes and keep traffic flowing.

Legend	Color	Overall Length	Overall Width	Thickness	Minimum Application Temperature	Maximum Application Temperature	Item No.
Pavement Pre-Determined Messages							
Handicap	Blue	38"	3-ft	90 mil	—	300 °F	18E570
	Blue/White	45"	45"	90 mil	—	300 °F	18E572
Pavement Line Rolls							
Rolls	Yellow	30-ft	4"	90 mil	32 °F	275 °F	18E661
	Yellow	30-ft	6"	90 mil	32 °F	275 °F	18E667
	Yellow	30-ft	12"	90 mil	32 °F	275 °F	18E669

Paint Thinners

These liquid paint thinners reduce the viscosity of paint.

General Purpose Paint Thinners—Solvents used to thin or reduce the viscosity of paints to prepare them for spray application or to clean up after their use.

Mineral Spirits—Petroleum-derived clear liquids used as a common organic solvent in cleaning up after painting. Mineral spirits are less expensive than turpentine and thin oil-based paints, stains and varnishes.

Lacquer Thinners—A mixture of solvents able to dissolve a number of different resins or plastics used in lacquer finishes. They clean tools and equipment after a lacquer project.

Xylene Thinners—Used for thinning paints, enamels, varnishes, and alkyd resins. They are

highly flammable and are recommended for ventilated or exterior use. Toluene paint removers are fast-drying solvents for thinning oil-based paints, varnishes, enamels and alkyd resins.

Xylol Thinners—Used for thinning paints, enamels, varnishes, and alkyd resins. Often specified as a thinner for specialty paints and coatings, xylene is highly flammable and is recommended for ventilated or exterior use.

Water Immersion Coatings—Protective layers that are applied to a material that will be subjected to water or liquid for an extended period of time. Thinners for immersion coatings reduce the viscosity of the coatings so that it can be spray-applied instead of brushed or rolled onto a surface. This is commonly done for surfaces that are not flat or are uneven.
