

## Roof Coatings

**Acrylic Roof Coatings** are liquid-applied seamless coatings that are sprayed or rolled onto a roof surface. Coatings turn white as they dry and adhere strongly to the areas where they are applied. They work well on pitched or steep-sloped roofs where they reflect sunlight, reducing heat transfer into buildings. These coatings also repel water and moisture for the life of the coating. Acrylic coatings are a short-lifecycle, low-cost roof coating option.

**Asphalt Roof Coatings** are two-course processes applied to preserve the surface of a roof and make it durable. Asphalt creates seamless, pliable water-resistant protection and levels irregularities on roof surfaces. The second coating is a protective to coat that repels moisture and UV rays. These coatings can be applied by spray, brush or paint rollers.

## Roof Repair Fabrics

Used for waterproofing and reinforcement, they are generally used as a part of a three-course roof coating application process that includes base coats and finishers (see coatings on this page). These fabrics include fiberglass cloths and polyester-blend fabrics.
