Vented Hard Hats—Type 1, Class C

■ Polyethylene

Venting helps dissipate heat to keep workers cool. Protect wearers from vertical impacts. Vents allow a clear path for electrical arcing, so hats should not be used in locations where electrical hazards are present. Front brims protect the face from sun, reduce glare, and help shed rain. Full brims protect both the face and neck. See Grainger.com® for available colors.

Top- and Side-Protecting Hard Hats—Type 2, Class E

■ Polyethylene

Padded to provide protection against vertical and angled impacts up to 60°. Provide high-voltage electrical protection up to 20kV. Worn when indicated by OSHA or where swinging objects (such as hooks or chains) are present. Front brims shade the face and eyes from sun and help reduce glare. Full brims also shade the neck. See Grainger.com® for available colors.

Work-at-Height Vented Climbing Helmets—Type 1, Class C

- ABS material
- Accessory slots

Venting allows air to circulate and keeps workers cool. Protect the head from vertical impacts caused by falling objects. Should not be used in locations where electrical hazards are present. Helmets enclose the back and side of the head and have a chin strap to keep the helmet in place if a fall occurs. See Grainger.com® for available colors.

Work-at-Height Climbing Helmets—Type 1, Class E

- ABS material
- Accessory slots
- Non-vented

Protect the head from vertical impacts caused by falling objects. Nonconductive and provide high-voltage protection up to 20kV. Helmets enclose the back and side of the head and have a chin strap to keep the helmet in place if a fall occurs. See Grainger.com® for available colors.
