Electrical Insulating Gloves

- Meet ASTM D120 specifications and NFPA 70E standards
- Available in glove sizes from 7 to 12 at Grainger.com

Rubber Insulating Gloves are made of dielectric natural rubber to protect workers from electrical hazards. Voltage Class is the maximum use voltage for the glove. Type I gloves are not ozone-resistant. Type II gloves are ozone- and UV-resistant. Workers should use a Voltage Class and Type rating that meets their worksite requirements. See Grainger.com for detailed information on Voltage Class and Type.

Leather Protectors are worn over rubber gloves to protect from pinpricks, tears, and abrasion. They do not provide protection against electrical shock when worn alone.

Glove Kits include a pair of electrical-insulating rubber gloves and a pair of leather protector gloves. Also include glove bag where noted.

Arc Flash Protection Equipment

Enclose or insulate against electrical hazards to help prevent exposure to electric arcs and reduce the risk of injuries to workers.

Arc Protection Blankets provide barrier protection from exposure to explosive electrical arcs and flashes.

Shock Protection Blankets cover energized components to protect workers from electrical hazards and provide a protective barrier on electrical equipment located in cubicles, switchboards, and substations.

Grounding Sets protect workers from electrical shocks and prevent damage to equipment.

Electrical Sticks and Rescue Hooks protect workers from electrical charges when checking energized equipment and responding to emergency situations. Hot switch sticks can be used to help check transmission lines, power distribution equipment, down power lines, fuses, and load break connectors. Rescue hooks help withdraw injured workers out of a hazardous area.

Insulating Line Hoses cover high-voltage lines to prevent against accidental contact with live wires. Type II ozone- and UV-resistant rubber maintains flexibility in cold weather.
