Pressurized Portable Eyewash Stations

■ Meet ANSI Z358.1

Stations attach to a water-filled pressurized tank that delivers water to flush contaminants. They have a stainless steel tank that resists corrosion and handles for moving around a worksite.

Heated stations include a heated jacket. Jackets plug into a power source to prevent water from freezing and keep water flowing freely.

Hazardous location stations are used where flammable vapor, combustible dust, or ignitable flyings are present.

Refills & Water Preservatives for Portable Eyewash Stations

Keep fluid in gravity-fed and pressurized portable eyewash stations clean and purified.
