

## Cabinets for Fire Extinguishers

Cabinets fully enclose the extinguisher to protect it and prevent tampering while ensuring extinguishers are still accessible when needed. **Break-glass windowed cabinets** lock to prevent tampering and allow extinguishers to be visually inspected without opening the cabinet. The cabinet has a tool or handle used to break the glass to access the extinguisher in an emergency. NFPA 10 regulations require that extinguishers be placed and easily accessible at intervals around a facility.

## Mounting Brackets for Fire Extinguishers

■ Each hold 1 extinguisher

Brackets secure extinguishers so they're accessible when needed. Brackets are easier to install than cabinets and provide easier access to extinguishers. NFPA 10 regulations require that extinguishers be placed and easily accessible at intervals around a facility. **3JMY2** is a package of 6. **Wall brackets** have a forked top to secure extinguishers to a building wall. **Vehicle brackets** use a strap to secure extinguishers to a vehicle or building. **Marine brackets** are U.S. Coast Guard-approved for use on boats. Mounts have a strap and fork that hold the nozzle securely. They can also be used in vehicles. All have a metal strap, except 3JLR6 has a rubber strap.
