

Safety Cabinet Information

Safety cabinets keep dangerous liquids organized, labeled, and separate from work areas. All include warning/content labels.

Consider the following when selecting a cabinet:

- Federal, state, and local compliance requirements
- Hazardous chemical flash point

OSHA COMPLIANCE:

The combined total of Category I, 2, 3 and 4 liquids should not exceed 60 gal.

FLASH POINT GUIDE FOR OSHA:

Category 1 and 2 Flammables - Below 73.4°F

Category 3 Flammables - At or Above 73.4°F/At or Below 140°F

Category 4 Flammables - Above 140°F/At or Below 199.4°F

NFPA 30 COMPLIANCE:

The combined total of all Class I, II, and III liquids should not exceed 120 gal.

FLASH POINT GUIDE FOR NFPA 30:

Class I Flammables - Below 100°F

Class II Combustibles - 100° to 139°F

Class III Combustibles - 140°F and above

DOOR CLOSURE TYPES:

Manual requires a worker to close the door.

Self-closing shuts automatically when the door is released to meet NFPA 1 fire code standards.

DOOR STYLES:

Single hinged has one door.

Double hinged has two narrow doors to allow doors to be fully opened in a smaller space.

Single bi-fold folds in the middle when open to take up less floor space.

Four hinged has four doors to allow doors to be fully opened individually.

MATERIALS:

Steel is powder-coated to resist corrosion.

Polyethylene is suitable for highly aggressive liquids and has no metal parts to corrode.

Wood laminate resists corrosion from harsh acids. It keeps cabinet contents cooler longer than steel cabinets, which transfers heat to the cabinet interior.

CABINET TYPES:

Standard-height are 35" or taller and do not have a toe kick.

Slimline are 24" wide or less to fit into smaller spaces.

Undercounter have a recessed toe kick to allow workers to stand comfortably in front of the cabinet.

Countertop are small enough to fit on most workbenches (less than 35" high) to keep items at eye level and easily accessible.

Stackable have a footprint that fits onto an existing base so cabinet capacity can be safely expanded without using more floor or countertop space.

Wall-mount have mounting holes in the back of the cabinet to allow them to be hung on a wall without drilling holes that can damage the integrity of the cabinet.

Drum safety storage do not have shelves in the lower portion of the cabinet to accommodate large containers such as 30- and 55-gallon drums.

Combination standard and drum storage safety have two distinct storage areas that store small- to moderate-sized containers and 55-gallon drums.

IBC (Intermediate Bulk Containers) tote safety lockers have a large sump capacity to contain spills and help meet compliance requirements. Heavy duty construction supports the weight of the container and its contents.

Aerosol safety storage have shelves with cutouts to accommodate standard-sized aerosol cans.

**Standard Wood Laminate
1AG24**
(Contents not included.)

**Undercounter Steel
8XCN1**

**Standard
Polyethylene
45UW92**

**Countertop
Steel

Acids & Corrosives
Safety Cabinets

- Blue color
- For small container storage, except 13M568 holds 1 drum
- Steel cabinets include leveling feet
- For indoor use
- Justrite steel cabinets are FM approved and meet International Fire Code and NFPA 1 standards
- Jamco steel cabinets are FM approved and meet UFC 79 standards

These cabinets store acids and corrosives and protect them from hazards and help contain spills that can contaminate the worksite. They also prevent the contents from igniting in the event of a fire and have chemical-resistant coatings to protect surfaces from spills and leaks. Modular Quik-Assembly, polyethylene cabinets offer lockable doors that open 180° and adjustable shelves.

Additional shelves create extra storage space or replace damaged shelves. Match the brand of shelf and cabinet together along with the storage capacity.

							DOOR CLOSURE TYPE	SELF-CLOSING
Storage Cap.	Ext. Dim. (W x D x H)	Door Handle Type	Lock Type	No. of Shelves	No. of Doors	Brand	MANUAL Item No.	Item No.
