Honeywell
MILLER

Miller Revolution™ Full-Body Harnesses

- Meet ANSI, and CSA standards
- Tensile strength: 6000 lb.
- Capacity: 400 lb.

Durable harnesses have flexible, 2-sided polyester webbing with contrasting color. Shape retention memory and independent upper- and lower-torso adjustments make them comfortable enough to wear all day. Web finials' clip-on design organizes webbing after proper adjustment. Highly visible encapsulated pack protects label. Stand-up D-ring allows easy attachment. Back shield conforms to most body shapes, keeps back D-ring in proper position, and minimizes impact from snap hooks and self-retracting lifelines. Cam buckle permits 1-handed adjustment or release simultaneous with shoulder strap (except 2KUC2 has friction buckle shoulder straps). PivotLink™ Connection rotary design allows harnesses to move with the body. Provides attachment point for belts, tools, and accessories. Fall indicators take the guesswork out of when to take harnesses out of service. Flexible belt pads on 5PA95 to 5PA98 minimize absorption and maintain optimal air circulation during positioning.

Revolution™ Construction—Designed to meet the durability requirements for construction applications while providing all-day comfort. Feature back and shoulder padding and modular accessory attachment system.

Revolution™ Arc-Rated—Insulated against electrical shock, with fire-retardant Kevlar® webbing and leather under all hardware. 1XEN8 and 3PRU1 have front rescue loops. 3PRU1 has pad and removable belt. For more Arc-Rated products, see page 1725.

Revolution™ Vinyl-Coated—Ideal for dirty environments such as petrochemical and water treatment plants. Resists physical deterioration resulting from exposure to a variety of liquids and maintains overall performance level.

Relief Step™ Safety Device—Allows suspended worker to stand up in harness to enhance blood circulation and prevent suspension trauma after a fall. Small, lightweight unit attaches to any full-body harness.
