

Plastic Spill Containment Pallets

- Supports EPA Compliance 40 CFR 264.175
- Supports SPCC Compliance
- Black grate color
- Nonmodular, except 3KN24 is Modular

Pallets hold drums and other containers and have a containment sump that captures liquid spills.

Low-Profile Plastic Spill Pallets—Are not as tall as standard pallets, making it easier to load and unload drums on and off of them. They also make it easier to dispense liquids from drums. These pallets meet necessary spill containment requirements.

Plastic Spill Pallets—Have a built-in containment sump that captures liquid spills from drums and containers. Pallets have grated flooring that can be removed and cleaned.

Flexible Sidewall Plastic Spill Pallets—Have a rugged, PVC fabric sump that reduces the unassembled size of the unit, and makes it easier to store, transport, and ship.

Nestable Plastic Spill Pallets—Can be stacked to save space. The removable grating aids cleanup and inspection. They can be moved with a forklift when stacked together.

Inline Plastic Spill Pallets—Save floor space and make drum handling easier. They are connected to a spill-deck sump to contain liquids.

Fluorinated Plastic Spill Pallets—Get treated with a process that makes them compatible with aggressive chemicals and certain chlorinated solvents.

Plastic Spill Pallet with Removable Sump—

Combination of a forkliftable sump and forkliftable pallet: allows the loaded pallet to be lifted off the sump and transported while the sump remains in place.

Note: Products do not include any pictured containers.
