Safe-Flex Interlocking Mat System

- 1 in thick
- Vinyl material
- Drainage mat tiles have diamond shaped holes
- Welding safe and ISO Class 8
- 55WF62, 55WF63, 55PK54, and 55PK58 are also antimicrobial

Interlocking mats have two male and two female sides to connect tiles to fit the space. Standardized connections allow different tile types (antifatigue and drainage) to be connected in the same configuration. The bottom of the tile is raised to allow cords to run under the tile.

Cushion-Ease Interlocking Mat System

- 3/4 in thick

Interlocking mats have male/female edges so tiles are easier to match. Mat types can be cut to create custom configurations of solid surface and drainage mats. Nibs on the back increase flexibility to improve antifatigue properties over flat bottom mats. Beveled edging works with all mat styles in the same series.

Diamond Flex-Lok Interlocking Mat System

- 1 in thick
- Diamond plate surface
- Vinyl material

Interlocking mats have a diamond pattern surface to provide traction and prevent slips and falls. Post-in-hole attachments keep tiles secure. Standardized connections allow different tile types (antifatigue and drainage) to be connected in the same configuration.

ErgoDeck Interlocking Mat System

- 7/8 in thick
- Drainage mat tiles have square shaped holes
- 793G95, 793G97, 793G98, and 793GA1 are ISO Class 9

Standardized connections allow all styles of ErgoDeck tiles (antifatigue and drainage) to be connected in the same configuration. The locking system ensures tiles remain secure on uneven surfaces and allows mats to be rolled for cleaning. All mats can be rolled without disconnecting and can be cut to size in 3" increments. Drainage mats have holes to move liquids and small debris off the surface of the mat. Single mats can be replaced as necessary when damaged. Beveled edging works with all ErgoDeck mats and can be added as needed.
