Fire Barrier Products

Cable Pass-Through Devices—Intumescent material expands rapidly when exposed to fire or high heat to quickly seal pathways. STI EZ Path devices eliminate the need to remove and reinstall or adjust fire-stop materials. 6LE11 and 3BE71 include the EZ Path device and 1 set of wall plates and labels. 32TL92 Smoke and Acoustical Pathway is designed for easy installation in nonrated floors and walls. This pathway has been tested and approved for cable capacities ranging from 0 to 100% visual fill. In these installations, the device does not require mechanical attachment to either the wall or the wall framing and may be installed after the wallboard has been installed. Split body design can be easily disassembled and installed around previously installed cables in existing construction. Multiple ganged devices using duplex, or quad wall plates provide additional capacity or segregation of cables by use, type, installer, or vendor as desired. 49VU22 includes the EZ Path device, 1 set of wall plates, labels and gaskets. 52ZW83 and 52ZW87 Marine Cable Transits are zero-maintenance, designed to take control of your fire-rated divisions in nonwatertight applications without the need to mechanically seal openings. Install individually or gang together to accommodate future expansions or increased cable load capacity. The heavy-duty mounting plates can be welded or even bolted to the fire-rated division for fast and convenient installs at sea or in dry dock. 3M 1XRR4 pass-through device is hinged for easy retrofit installation around cables. 53XH82, 53XH83, and 49VU22 are UL and C-UL Classified.

Cable Pass-Through Brackets—1FET7 is a range-taking mounting bracket kit providing 1 to 5 positions (slots) for mounting “ganged” pathways (devices) in wall assemblies. Multiple pathways are installed as a single group using adjustable vertical end brackets.

Cable Grommets—Eliminate the need for putty or sealant. 2-pc. polymer grommets snap together for easy installation. UL and C-UL Classified.

Sleeve Kits—Ready-to-install kits include sleeves, brackets, screws, and putty. 5GUZ6 and 5GUZ7 are UL Classified.
